RESUMEN: We describe a new hybrid between *Salvia lavandulifolia* Vahl subsp. *lavandulifolia* and *Salvia officinalis* L., spontaneously generated by taking the parents into contact through the cultivation at the aromatic plants experimental plots of the CIAF Albaladejito (Cuenca), which we consider a novelty in the subspecific range, since the type involved *S. lavandulifolia* subsp. *vellerea*.

Agradecimientos: The authors thank to the Regional Institute of Castilla-La Mancha for Agri-Food and Forest Research and Development (IRIAF) and the Council of Sustainable Development of Castilla-La Mancha
